

Management and Governance

Vandis brings extensive real-world experience in advising, managing and Directing technology based product and service providers. We understand the management and governance that is required for a business based on its size, its industry, its client base, its management and its ownership.

Management and Governance have significantly different characteristics in public companies, government or high growth private enterprises – yet they all draw on the consistent need to ensure that individuals can adequately execute their responsibilities for ensuring the appropriate operation of the business.

Technology based product and services businesses are no exception.

Executives and Boards need clear understanding of the risks, exposures, trends, and visibility of the consistency and suitability of actions taken to address issues which arise in order to manage their legal liability or direct financial involvement in the business.

Maximum visibility is achieved by creating a framework of reporting exceptions – areas where the organisation is failing to operate in compliance with expectations. This in turn relies on the creation of a meaningful and measurable definition of expectations, and ongoing business level communication between IT and senior executives.

We use our technical insight and understanding, real-world commercial experience, emerging IT management practices and standards, and traditional business management disciplines to document this expectation and define the ongoing reporting frameworks which gives a solid basis to your business management and governance.

Call in the strictest confidence to discuss how Vandis can help to develop appropriate Management and Governance practices for your business.
